

This trip has three pieces. Which pieces matter, and how could we build the whole trip from them?

MISSION: The Three-Part Route

The problem

Amira walks 3 blocks to the library, then 4 more blocks to the playground, then 2 more blocks home. How many blocks does she walk altogether?

CLUE 1 - What is the problem asking you to find?

Say it in your own words. No calculating yet.

CLUE 2 - What do you KNOW about the route?

Find the separate pieces of the trip. Write or sketch each distance before you decide what to do with them.

YOUR FIRST PATH - What will you try?

Draw the route, group pieces, make jumps, or use numbers. You choose how to build the whole trip.

THINKING TOKENS

I found the parts

I built the whole

I tried a grouping

Do not let me steal the puzzle! Use one hint only when you need a new clue.

Use hints one at a time.

Tip for printing: cover each hint with a sticky note or a strip of scrap paper. Reveal only the next one you need.

HINT 1 - FIND THE PARTS

How many separate walking pieces are in the story? What is the distance of each piece?

HINT 2 - WHAT COUNTS?

The question asks for the whole trip. Do all three walking pieces belong in that whole?

HINT 3 - GROUP IT YOUR WAY

You can combine two pieces first, then add the last one. Which two look easiest to combine?

HINT 4 - TRY A FRIENDLY PAIR

What happens if you put the 3-block piece and the 2-block piece together first?

BACK TO YOUR PATH

Now try again. What did the hint help you notice?

Route solved! First show how you built the whole from the pieces. Then write where you landed.

1. Show your path

Show how you combined the three parts. Your order does not have to match the story order.

2. Your answer

How many blocks did she walk altogether?

3. Another door?

Can you regroup the same three distances in a different order and still get the same total?

My second idea:

4. Choose the Thinking Moves you used

- | | |
|---|--|
| ☐ Found the parts | ☐ Grouped useful parts |
| ☐ Built part to whole | ☐ Checked the total |
